REACT NATIVE TUTORIAL

Build your first mobile application

React Native

EXISTING INVENTORY

What will you learn?

- Setting up a project
- Rendering Components (Texts, Views, Images)
- Creating Custom Components
- Using Props
- Rendering Scrollable Lists

Who am I

- Full stack developer for >7yrs
- CTO @Fitinium
- ex Amazon Intern
- Passionate about coding and building impactful startups.

Prerequisites

1. Expo CLI
2. Expo client app for iOS and Android
3. Assets: <http://assets.notjust.dev/tesla>

Docs: <https://docs.expo.io/get-started/installation/>

Let's get started

||| Initialise the expo project:

|| \$ expo init TeslaClone

|| Open TeslaClone in your editor of choice
Then, start the project:

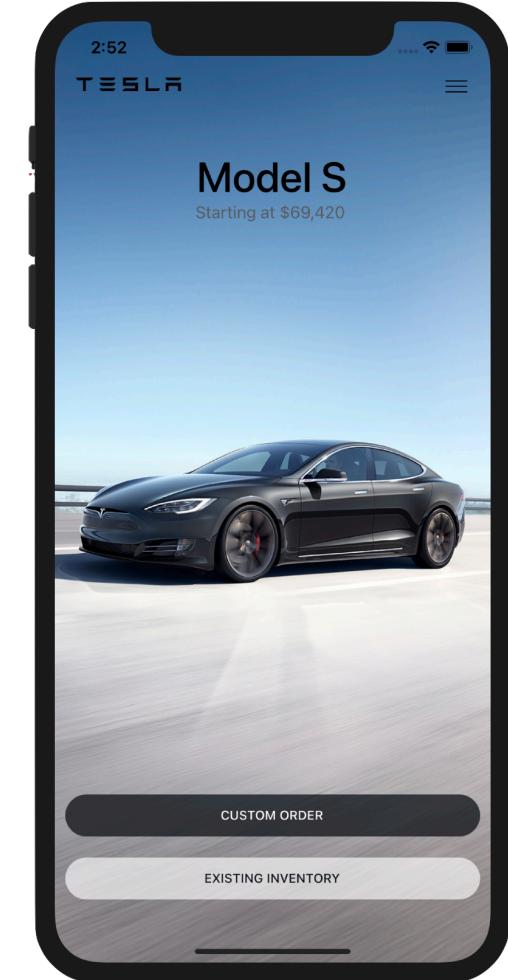

|| \$ yarn start

|||

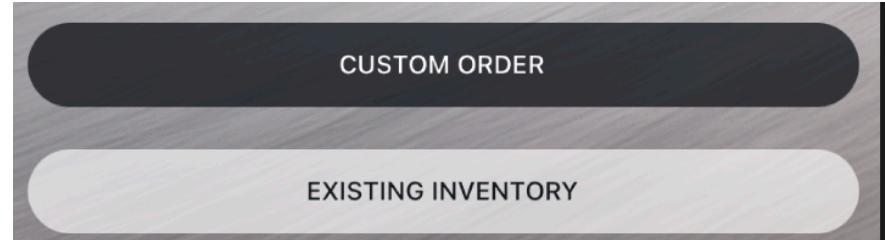

Car Item Component

1. Render the text (Model, etc.)
2. Render the Background Image
3. Create a separate component for CarItem

Button Component

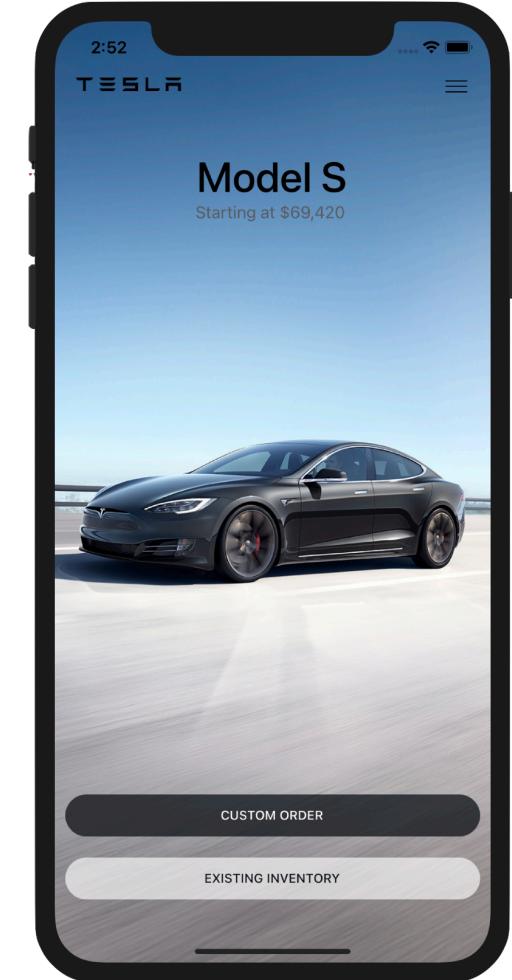

1. Create a separate component
2. Receive props
3. Style The button based on 'type' prop

Finish Car Item Component

1. Use buttons
2. Implement props

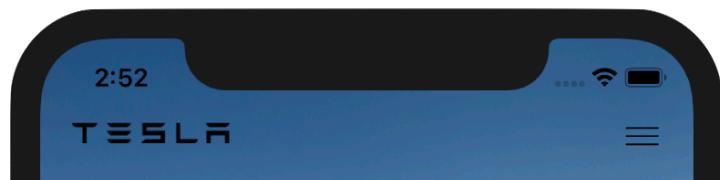

Render a scrollable list of Cars

1. Use the dummy data
2. Render the FlatList
3. Setup Snap to view

Render the header of the app
